Notice of Possible Fee Increase on October 1, 2002

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after October 1, 2002, then the amount due may be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there may be an increase in fees effective on October 1, 2002. See Revision of Patent and Trademark Fees for Fiscal Year 2003: Notice of Proposed Rulemaking, 67 Fed. Reg. 30634, 30636 (May 7, 2002). Although a change to the amount of the publication fee is not currently proposed for October 2002, if the issue fee or publication fee is to be paid on or after October 1, 2002, applicant should check the USPTO web site for the current fees before submitting the payment. The USPTO Internet address for the fee schedule is: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of any fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after October 1, 2002 (or mailed with a certificate of mailing on or after October 1, 2002), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

DETAILED ACTION

Allowable Subject Matter

1. Response to Office Action of March 14, 2002 was received on July 15, 2002. Independent claims 1, 6 and dependent claims 9 and 10 have been amended. Changes in the Abstract and specification have been made, as indicated.

2. Claims 1-10 are allowed.

3. The following is an examiner's statement of reasons for allowance:

With respect to independent claims 1 and 6, prior art fails to disclose an inductively coupled mass spectrometer (ICP-MS) system comprising an ion source, an ion interface, a reaction/collision cell section, with the ion interface providing an interface to the ions between the ion source and the reaction cell, and an ion-neutral decoupling device provided between the ion interface and the reaction/collision cell section, to provide substantial separation between ions and neutral particles, whereby only ions pass on to the reaction/collision cell section.

In the prior art, ion-molecule reaction cells are widely used and are sources of neutral particles because 99.9% of the gases constituting the plasma are not ionized. If these neutral particles are entrained into the reaction cell flow, the reactions become uncontrollable, because instead of high purity reaction gas introduced, it becomes a mixture of the reaction gas with entrained plasma

gases. Because of the pressure difference between the reaction cell and the vacuum of the system, the plasma gas goes through a supersonic expansion in the plasma-vacuum interface, allowing entrainment of neutral gas particles in the reaction cell.

The current invention, overcomes the above-mentioned problems by providing an ion-neutral decoupling device for separation of ions and neutral particles from a pure gas, and then passing the ion stream into a reaction/collision cell region. Specifically, the invention relates to the use of ion-molecule reactions that modify either analyte ions or interfering species, in order to effect m/z shift, and to separate isobaric analyte and interference ions from one another, so as to give better resolution for the analyte ions. The decoupling device has offset apertures provided by plates or skimmers or rods or other comparable arrangement, or can comprise a quadrupolar electrostatic section deflector or a magnetic section deflector, to separate ions and neutrals, which otherwise would contaminate the system.

Claims 2-5 and 7-10 are allowed by virtue of their dependencies on independent claims 1 and 6.
